

The best students of SPbPU's corporate master's degree programs received an internship in China

At the end of June, an international project «Embrace a Green and Wise Future of Energy» was implemented at the China Petroleum University (Beijing). A Russian-Chinese summer camp was opened in China, where representatives of three Russian universities came: SPbPU, Ufa State Petroleum Technical University and Ufa University of Science and Technology.

The program was divided into several blocks: educational, sightseeing and cultural. The students listened to lectures on artificial intelligence, information technology and sustainable development, and visited the museum of the Chinese National Petroleum Corporation. Polytechnics also saw the main sights of the Celestial Empire — the Great Wall, the Tombs of the Ming Dynasty, the Olympic Park and the Forbidden City in the center of Beijing. As part of the cultural exchange, the students were taught Chinese language, calligraphy and Wushu. Here is what the students said about the trip.

Lidia Gaponova, Enterprise IT Infrastructure Program: *«It was useful to attend lectures on the use of information technology in mineral exploration and production. In addition, we participated in a seminar on approaches to reducing our carbon footprint. The group was also able to visit the China National Petroleum Corporation. The company's museum contains reference oil samples brought by Soviet engineers during the construction of the country's first oil refinery. Representatives of the company speak with gratitude about the assistance provided by the USSR to China in the mid-20th century. And they emphasize the successful cooperation nowadays».*
